

SYMMETRICAL LIQUID CRYSTAL DISPLAY PANEL

Abstract

A symmetrical LCD panel has a substrate, at least a source driver IC positioned on a central part of a peripheral area of the substrate, a flexible circuit board positioned on the same side as the source driver IC of the substrate, at least a gate driver IC positioned on a central part of the flexible circuit board, and a plurality of conductive wires connected to the gate driver IC, the source driver IC, and a display area of the substrate.
